Orchestrator (the LLM agent in its runtime, following the AvirmathAI skill rules)
decides who works next · runs the checks · stops for the founder's approval · gives up after 3 failed fixes
All eight agents are the same large language model, given a different job, different tools and a different file to produce.
Each one first reads the AvirmathAI skill: pedagogy, maths-visuals, Manim, visual-style and production rules, plus the starter scenes.
1 Profiler
what to teach, at what level
2 Historian
true origin story + industry use
3 Math Author
writes the maths as code
4 Math Verifier
tries to break it (125 tests)
maths tests pass
5 Lesson Writer
story, narration, equations, quiz
H
6 Animation Director
draws every scene (Manim)
7 Visual Critic
watches every frame muted
8 Experiment Builder
the interactive 3D playground
founder approves the storyboard
every frame clean
then the machines take over — no AI, same result every time
Voice
Sonia, British neural voice
Sync
animation timed to the words
Render
Manim + LaTeX
Assemble
FFmpeg: captions, chapters, logo
Website
Python makes the lesson page
Shared files instead of chat: lesson.yaml · maths module + tests · facts dictionary · word timings · project memory
Output of one run: narrated 3D video + captions and chapters + web lesson page with assessment + search-engine pack
