learner feedback and on-demand requests come back to the founder
Founder
picks a topic from the catalogue, or a learner pays for a new topic
Lesson factory
orchestrator + 8 agents + machines (see Part 1) about one day per lesson
Shared files
lesson.yaml maths module + tests video, captions, pack
Website
static HTML + KaTeX + Three.js, built by web/build_site.py
Learner
story → maths → AI use → industry example → quiz → experiment
Memory (plain files, no vector database)
skill = how to work · artifact store = the current lesson project memory = founder's rules, kept across sessions
What is NOT used
no LangChain, no LangGraph, no vector RAG, no React, no CMS, no image/video generators, no voice cloning
